

## gfai tech launches B2B webshop for sound and vibration analysis

Whether for the acoustic analysis of belts and bearings to detect damage or wear or for visualizing vibrations in brake discs to enhance safety, the new gfai tech webshop offers businesses an easy way to purchase high-quality hardware and software for sound and vibration analysis online.

“We are excited to provide our customers with simplified access to our advanced solutions for sound and vibration analysis through the new webshop,” says Philip Höhna, Managing Director of gfai tech.

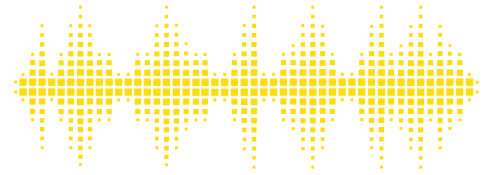

The webshop features a carefully curated selection of acoustic cameras, including the proven all-in-one solutions **Mikado** and **Octagon**. The offering is complemented by the Microsoft® Surface Pro 9, preloaded with the noise analysis software **NoiseImage**. Customers can also find durable aluminum tripods that ensure precise measurement results even under challenging conditions.

Additionally, the webshop offers the **WaveCam** vibration analysis software, which makes even the finest vibrations visible in video recordings. A standout product is the **WaveHit<sup>MAX</sup>**, the world’s first intelligent impulse hammer. With a single strike on a test object, it delivers precise insights into broadband vibration behavior and acoustic properties. Customers can choose between two types of force sensors to suit their needs.

The webshop allows customers to browse the product range, learn about features and pricing and order their desired products with just a few clicks—payment options include advance payment or credit card. Thanks to its responsive design, the webshop seamlessly adapts to any screen size, providing an optimal user experience on smartphones, tablets, and desktops alike.

The webshop is now live at [shop.gfai.tech](https://shop.gfai.tech) and targets customers in industries such as automotive, mechanical engineering, aerospace, and research and development. The products are designed to streamline and simplify analysis processes, enhancing efficiency and precision.

### About gfai tech

gfai tech GmbH is a German company specializing in innovative sound and vibration measurement and analysis solutions. We offer advanced Acoustic Cameras, comprehensive analysis software, and cutting-edge structural dynamics solutions. Our expertise spans various industries, helping customers achieve noise reduction, false detection, sound design improvement, and precise vibration monitoring. As a subsidiary of GFal e.V., we provide unique hardware, software, and customized customer solutions backed by global support.
